Environmental Archaeologies of Neolithisation

<http://sites.univ-provence.fr/lampea/spip.php?article1849>

9 novembre - 12 novembre 2012

University of Reading

The origins and spread of Neolithic life-ways represent a pivotal change in human ecology and society. Communities transformed their relationships with the world around them, shifting away from reliance upon hunted and collected wild resources, to the management and domestication of plants and animals, alongside a pattern of increasing sedentism. These processes were played out at differing temporal and spatial scales; from the life-cycle of a single organism of a population on the path to domestication, to the dissemination of 'new' farming economies around the world.

The conference aims to examine any aspect of Neolithisation at the varying scales of analysis that environmental archaeology can offer, from changes within a single site to those played out over continents.

Unravelling Human Origins Conference

<http://sites.univ-provence.fr/lampea/spip.php?article1854>

18-19 janvier 2013

Cambridge

The conference will be organised around three broad thematic sessions:

- adaptation to old and new landscapes :

includes studies of hominin dispersals, adaptations to new landscapes, population changes through time, themes that would permit a multidisciplinary discussion of humans in their landscape(s). Presentations from the following fields are particularly welcome: ancient DNA and population genetics, isotope studies, lithic and faunal analyses, climatic and environmental studies, human remains, as well as cognitive approaches to changing landscape(s).

- creativity, communication and personhood :

focus on inter- and intra-group social interactions, origins of language as metaphor, non-verbal communication as a form of early notification, the role of arts and crafts as technology and aesthetic experience, creation of meaning as a socially recognisable signification of individuals.

- food in the Palaeolithic :

designated to include a wide range of topics, from reconstructions of the diet of early hominins to the social context and meaning of food and consumption techniques in the Late Pleistocene. Applications of new analytical approaches to food remains and subsistence strategies are also welcome.

12th Archaeological Chemistry Symposium

<http://sites.univ-provence.fr/lampea/spip.php?article1851>

du 7 au 11 avril 2013

New Orleans, Louisiana

The 12th symposium will consist of both invited and contributed presentations, talks and posters, from researchers in the fields of archaeological science, with emphasis on chemical analysis of cultural heritage materials. The presentations will range from a poster session to a keynote talk from one of the leaders in the field of archaeological chemistry.

Watch for further details (by email, or follow us on Twitter @12thArchaeoChem) about the exact dates of the Symposium, and a list of invited speakers.

Please submit your abstracts for this upcoming symposium!

Abstracts may be submitted online via the ACS online abstract submission system until October 29, 2012 (EXTENDED DEADLINE) at

http://abstracts.acs.org/chem/245nm/meetingview.php?page=session&par_id=501

Please note that there are two links from there: one for posters, the other for oral presentations.

For additional information, please contact the Symposium organizers:

- Ruth Ann Armitage (rarmitage@emich.edu)
- James Burton (jhburtan@wisc.edu)

Job Vacancy: Research Associate "Cultural Evolution of Neolithic Europe"

<http://sites.univ-provence.fr/lampea/spip.php?article1848>

London : Institute of Archaeology - UCL

The aim of the project, funded by the European Research Council, is to address specific questions concerning the links between demographic, economic, social and cultural patterns and processes and in doing so to provide the basis for a new account of the role of farming in transforming early European societies, c.6000-2000 cal BC. The project has a team of five postdoctoral researchers, specialising in archaeobotany, zooarchaeology, radiocarbon data, material culture and site data.

A researcher is now being sought responsible for managing the database and GIS as well as carrying out more complex analytical procedures, including spatial and phylogenetic analyses and modelling, in association with the other RAs. The post is available from 1 January 2013.

Plus d'infos
